 - 7.4 Staff adds a candidate by importing a CV
 - 7.5 A company registers and is approved
 - 7.6 Staff shares a candidate profile with a company
 - 7.7 The company reviews the profile and responds
 - 7.8 Posting a job and seeing it on the careers page
 - 7.9 Enquiry, client, invoice and payment
 - 7.10 HR: employees, attendance, leave and payroll
 - 7.11 Forgotten password
 - 7.12 Editing the public website content
8. Known limitations in the test environment
9. How to report an issue

1. About this guide

This guide walks you through testing the AI Khadim platform from end to end. It lists every test login, shows exactly where each feature lives, and gives numbered steps for each workflow. No technical knowledge is needed - only a web browser.

How to use it

- Read Section 2 first. It explains three things about the test environment that will otherwise confuse you.
- Work through the flows in Section 7 in order. Each one builds on the one before it.
- After each step, compare what you see against the **Expected result** line.
- If something does not match, record it using the template in Section 9.

A note on wording: a path written as **Admin > Recruitment > Candidates** means - open the Admin panel, click **Recruitment** in the left sidebar, then click **Candidates**.

2. Before you begin

Item	Detail
Test website address	_____ (your team will provide this)
Recommended browser	Google Chrome, Microsoft Edge or Brave - latest version
Devices	Works on desktop and mobile. Test both if you can.
Sign-in page	Use the Log in button at the top right of the website

Three things to know before you start

This is a test environment. Every company, job and candidate you see is sample data created for testing. You can freely create, edit and delete anything - nothing here is real and nothing will reach a real customer.

Emails are not being delivered yet. Where the platform would normally email you a 6-digit verification code, the code is instead shown on screen in a yellow box and filled in for you. Welcome emails, team invitations and notifications are recorded inside the system but are not sent out. This is expected until the mail server is connected.

New sign-ups must be approved before they can log in. When a candidate or a company registers on the website, they cannot sign in immediately. A staff member must approve them first in the Admin panel. This is intentional. Flows 7.2 and 7.5 show you how. If you register and then get 'Invalid credentials or account not yet approved', this is why.

3. The four areas of the platform

The platform is one website with four distinct areas. Each has its own sign-in.

Area	Who uses it	Address	How to sign in
Public website	Visitors, job seekers, employers	/	No sign-in needed

Area	Who uses it	Address	How to sign in
Staff & Admin panel	The AI Khadim internal team	/admin	Log in menu > Staff / Admin
Candidate portal	Registered job seekers	/candidate/dashboard	Log in menu > Candidate
Company portal	Client companies you share profiles with	/company/dashboard	Log in menu > Company

Pick the right sign-in. The **Log in** button at the top right of the public website opens a small menu with three choices: Candidate, Company, and Staff / Admin. Each one checks a different set of accounts. If you use the wrong one, the login will be refused even when the email and password are correct. On mobile, the same three choices appear under the menu button, below 'Log in as'.

4. Test accounts and passwords

All passwords are case sensitive. Type them exactly as shown.

4.1 Staff and Admin panel

Sign in through **Log in > Staff / Admin**.

Role	Email	Password	What this account is for
Super Admin	admin@alkhadim.ae	Admin@123	Complete access, including AI settings, custom roles and deleting users
Admin	admin@demo.alkhadim.ae	Admin#Khadim26	Everything except the Super-Admin-only items above
Manager	manager@demo.alkhadim.ae	Manager#Khadim26	Sales/CRM and recruitment
Recruiter	recruiter@demo.alkhadim.ae	Recruiter#Khadim26	Recruitment only - candidates, jobs, interviews
HR	hr@demo.alkhadim.ae	HrTeam#Khadim26	Employees, attendance, leave and payroll
Accountant	accountant@demo.alkhadim.ae	Accounts#Khadim26	Invoices, expenses, accounts, budgets and payroll
Viewer	viewer@demo.alkhadim.ae	Viewer#Khadim26	Can look at everything, cannot change anything

4.2 Candidate portal

Sign in through **Log in > Candidate**.

Email	Password	Notes
rajesh.kumar@example.com	Candidate#Khadim26	A demo candidate that is already approved, so it can sign in straight away

4.3 Company portal

Sign in through **Log in > Company**.

Email	Password	Notes
company@demo.alkhadim.ae	Company#Khadim26	Represents the demo client 'Emirates Group'. Already approved.

Sample data already in the system. Two demo client companies (Emirates Group, ADNOC Group), three open jobs (Senior Software Engineer, HR Manager, Civil Engineer) and two candidates (Rajesh Kumar, Maria Santos). You will use these in several flows below.

5. What each staff role can access

Use this table to check that permissions work. Sign in as each role and confirm the sidebar only shows what it should, and that blocked actions are refused with a red message.

Full = can view and change. **Read** = can view, every change is refused. **No** = no access.

Area (sidebar)	Super Admin	Admin	Manager	Recruiter	HR	Accountant	Viewer
Dashboard	Full	Full	Full	Full	Full	Full	Read
CRM - Deals, Clients, Follow-Ups, Enquiries	Full	Full	Full	No	No	No	Read
Approve company registrations	Full	Full	No	No	No	No	No
Recruitment - Candidates, Jobs, Interviews	Full	Full	Full	Full	No	No	Read
Recruitment - CV Registrations, Profile Shares, Tracking	Full	Full	Full	Full	No	No	Read
HRMS - Employees, Attendance, Leave	Full	Full	No	No	Full	No	Read
Payroll	Full	Full	No	No	Full	Full	Read
Finance - Invoices, Expenses, Accounts, Budgets	Full	Full	No	No	No	Full	Read
Reports	Full	Full	Full	No	No	Full	Read
Outsourcing, Documents	Full	Full	No	No	Full	No	Read
Emails	Full	Full	No	No	No	No	No
Team - Users (create, edit, disable)	Full	Full	No	No	No	No	No
Team - Users (delete) and Roles & Permissions	Full	No	No	No	No	No	No
Site Editor	Full	Full	No	No	No	No	No
Settings - Categories, Industries, Email	Full	Full	No	No	No	No	No
Settings - AI Assistant	Full	No	No	No	No	No	No
Own profile and password	Full	Full	Full	Full	Full	Full	Full

Quick way to test a role

- Sign in as the role and try **one change in an area it is allowed** - it should save with a green confirmation.
- Then try **one change in a blocked area** - it should be refused with a red message, and nothing should change after you refresh.
- Finally, type a blocked page address straight into the browser - it should redirect you or show an empty/error state, never another team's data.

6. Where the CV / resume parser is

The platform reads an uploaded CV and fills in the person's details automatically. There are **two** places where this happens.

6.1 On the public website - a candidate uploads their own CV

Where to find it	Home page > click I want to work above the search bar > click Register . Or go directly to /candidate/register
What it does	Step 1 of the sign-up wizard is Upload CV . Drag in a PDF or DOCX, or click to browse. The system reads it and fills in first and last name, email, phone, location, years of experience, skills, languages and education on the next screen.
If you do not want to upload	Click Skip - I'll fill in my details manually under the upload box.

6.2 In the Admin panel - staff imports a CV on someone's behalf

Where to find it	Admin > Recruitment > Candidates > click the Import from CV button at the top of the list
What it does	Same reader. Upload the CV, check the fields it filled in, then save with Save as Draft (kept private) or Save & Make Public (also shown on the public Candidates page).
If you do not want to upload	Click Skip - I'll enter the candidate's details manually under the upload box, and type the details in yourself.

What to expect from the reader

- It works best on normal text-based PDF and Word files.
- A **scanned or photographed** CV is an image, not text, so nothing can be read from it. You will see a yellow notice and can type the details in manually - the rest of the sign-up still works.
- Treat the result as a **starting point**. Always read through the filled-in fields and correct anything before saving. Every field stays editable.
- If the reader is temporarily unavailable, both screens fall back to the manual form rather than blocking you, so testing can continue.

7. Test flows, step by step

Work through these in order. Flows 7.1 to 7.3 follow one candidate from applying to signing in. Flows 7.5 to 7.7 follow one company. The rest can be done in any order.

7.1 A candidate applies through the website

Tests: the CV reader, email verification, and the application being created.

- 1 Open the public website. Click **I want to work** above the search bar, then **Register**. (Or go straight to **/candidate/register**.)
- 2 **Step 1 - Upload CV**. Drag in a PDF or Word CV. Wait a few seconds while it reads the file.
- 3 **Step 2 - Review your details**. Check what was filled in. Correct anything wrong and complete the required fields: first name, last name, email and phone. Use a real email address you can recognise later, for example *yourname+test1@gmail.com*. Click **Continue**.
- 4 **Step 3 - Verify email**. A 6-digit code is requested automatically. Because email sending is not switched on, the code appears in a yellow box on screen and is already typed in for you. Click **Verify Code**.
- 5 **Step 4 - Create your password**. Enter a password of at least 8 characters, twice. Click **Submit Application**.
- 6 You will land on a confirmation screen saying the profile is under review.

Expected result: A green banner listed the details pulled out of the CV; the application was accepted; and the final screen tells you the profile is awaiting approval. **You cannot sign in yet** - that is covered in the next flow.

7.2 Staff reviews and approves the application

- 1 Sign in as **Super Admin** or **Admin** through **Log in > Staff / Admin**.
- 2 Go to **Recruitment > CV Registrations**.
- 3 Find the application you just submitted. It will have the status **Pending**.
- 4 Open it and check that the details and the uploaded CV match what was submitted.
- 5 Choose one of the two approval buttons: **Approve & Make Public** (the candidate also appears on the public Candidates page) or **Approve (Private)** (visible to staff only). Confirm the prompt.
- 6 To test the opposite path, use **Reject** on a different application.

Expected result: A confirmation appears saying the candidate was approved and their portal account was created. The row moves to the **Approved** tab, and the person now appears under **Recruitment > Candidates** with a CV ID such as AK-CV-2026-00007.

7.3 The candidate signs in and uses the portal

- 1 Sign out of the admin panel.
- 2 On the public website click **Log in** at the top right, then choose **Candidate**.
- 3 Sign in with the email and password from flow 7.1. (Or use the ready-made demo account: *rajesh.kumar@example.com* / *Candidate#Khadim26*.)
- 4 Work through the left-hand menu: **Dashboard**, **My Profile**, **Find Jobs**, **My Applications**, **Shared With** and **My Tracking**.
- 5 On **My Profile**, change something - a headline or a skill - and save it.
- 6 On **Find Jobs**, open a job and apply to it.

Expected result: Sign-in succeeds now that the account is approved. Profile changes save and are still there after a refresh. The job you applied for appears under **My Applications**.

7.4 Staff adds a candidate by importing a CV

This is the second place the CV reader is used - for CVs that arrive by email or in person.

- 1 Sign in to the admin panel and go to **Recruitment > Candidates**.
- 2 Click **Import from CV** at the top of the list.
- 3 Drop in a PDF or Word CV and wait for it to be read.
- 4 Review every field on the next screen and correct anything that is wrong. Add internal notes if you want.

- 5 Save with **Save as Draft**, or with **Save & Make Public** to also list the person on the public Candidates page.
- 6 Repeat once using **Skip - I'll enter the candidate's details manually** to check the manual route.

Expected result: The candidate is created and opens in their own profile page. If you chose 'Make Public', they also appear on the public Candidates page of the website.

7.5 A company registers and is approved

- 1 Sign out. On the public website go to **Log in > Company**, then click **Create a business profile**. (Or go directly to **/company/register**.)
- 2 Fill in the company details - company name, contact person, email, phone and industry - and set a password.
- 3 Verify the email with the 6-digit code. As before, it is shown on screen in a yellow box.
- 4 Finish the registration. You will be told the account is awaiting review.
- 5 Sign in to the admin panel as **Super Admin** or **Admin** and go to **CRM > Clients**.
- 6 Open the new company record and click **Approve Company**.
- 7 Sign out, then sign in through **Log in > Company** using the new company's email and password.

Expected result: Before approval, signing in is refused or shows a 'pending review' screen. After approval, the company dashboard opens normally.

7.6 Staff shares a candidate profile with a company

- 1 In the admin panel go to **Recruitment > Candidates** and open any candidate.
- 2 Click the green **Share Profile** button at the top of the profile.
- 3 Choose the company to share with - use **Emirates Group** if you want to view it with the demo company login afterwards.
- 4 Choose which details to include, then confirm the share.
- 5 Check the record under **Recruitment > Profile Shares**.

Expected result: The share is listed under Profile Shares with its status. The candidate also sees it in their own portal under **Shared With**.

7.7 The company reviews the profile and responds

- 1 Sign in through **Log in > Company** as company@demo.alkhadim.ae / Company#Khadim26 (or the company you created in flow 7.5).
- 2 Open **Candidates** in the left menu. The profile shared in flow 7.6 is listed.
- 3 Open the profile and review the details and the CV.
- 4 Respond using the buttons provided - shortlist, reject, or request an interview.
- 5 Sign back in to the admin panel and check **Recruitment > Profile Shares**.

Expected result: The company's response is reflected on the share record in the admin panel, and an interview request appears under **Recruitment > Interviews**.

7.8 Posting a job and seeing it on the careers page

- 1 In the admin panel go to **Recruitment > Job Orders** and click **Add Job**.
- 2 Fill in the title, client, location, salary range, number of positions and category. Save it.
- 3 Open the public website and go to **Careers**.
- 4 Search for the job title you just created.

- 5 Open the job and apply to it as a visitor.

Expected result: The job appears on the public careers page and can be searched. The application you submit shows up in the admin panel.

7.9 Enquiry, client, invoice and payment

- 1 On the public website, open **Contact** (or the **Get Started** / enquiry form) and submit an enquiry as a prospective employer.
- 2 In the admin panel go to **CRM > Enquiries** and confirm the enquiry arrived.
- 3 Go to **CRM > Clients** and click **Add Client** to create a client company.
- 4 Go to **Finance > Invoices** and create a new invoice for that client. Add a few line items and save it.
- 5 Open the saved invoice and record a payment against it using **Mark Paid**.
- 6 Check **Finance > Overview** and **Finance > Accounts** to see the figures update.

Expected result: The enquiry is listed, the client is created, the invoice totals calculate correctly, and the payment moves the invoice to paid and updates the finance figures.

7.10 HR: employees, attendance, leave and payroll

Sign in as **HR** (hr@demo.alkhadim.ae) or an Admin account.

- 1 Go to **HRMS > Employees** and click **Add Employee**. Create one employee.
- 2 Go to **HRMS > Attendance** and use **Mark Attendance** to record attendance for today.
- 3 Go to **HRMS > Leave**, click **New Leave** to raise a leave request, then approve or reject it.
- 4 Go to **Finance > Payroll**, generate the payroll for the current month, then use **Process, Approve** and **Mark Paid** in turn.

Expected result: Each record saves and is still there after a refresh. Payroll moves through its stages in order. Note that Approve is limited to Super Admin and Admin accounts.

7.11 Forgotten password

- 1 Go to the **Candidate** or **Company** sign-in page through the **Log in** menu.
- 2 Click **Forgot password?** underneath the password box.
- 3 Enter the account's email address and click **Send Code**.
- 4 Enter the 6-digit code. While email sending is off, it is shown on screen and pre-filled.
- 5 Set a new password of at least 8 characters and confirm it.
- 6 Sign in with the new password.

Expected result: The password is changed and the new one works immediately. Note that this only works for accounts that already exist and have been approved - asking to reset a password for an unknown email is correctly refused.

7.12 Editing the public website content

Sign in as **Super Admin** or **Admin**.

- 1 Go to **Site Editor** in the left sidebar.
- 2 Change something visible - the headline on the home page banner, or a section title.
- 3 Save the section.
- 4 Open the public website in a new tab and refresh it.

Expected result: The public website shows your change. Sections you switch off no longer appear.

8. Known limitations in the test environment

These are expected behaviours of the test setup, not faults. Please do not log them as bugs.

What you will notice	Why
Verification codes appear on screen in a yellow box instead of arriving by email	The mail server is not connected yet. Once it is, codes will be emailed and will no longer be shown on screen.
Welcome emails, team invitations and notifications never arrive	Same reason. The system records each message internally, and you can see them under Emails in the admin panel.
A newly registered candidate or company cannot sign in straight away	By design. A staff member must approve them first - see flows 7.2 and 7.5.
Some CVs return few or no details	Scanned or image-based CVs contain no readable text. Fill the details in manually - the manual option is always offered.
The extra AI-assisted reading of CVs may be inactive	It depends on a paid AI service key. When it is unavailable the platform quietly falls back to the standard reader, which still fills in most fields.
Sample data may be reset between test rounds	Records you create during testing may disappear after a refresh of the test environment. Take screenshots of anything you need to keep.

9. How to report an issue

The more precisely an issue is described, the faster it can be fixed. Please copy this table for each problem you find.

Field	Your answer
What I was doing	e.g. Approving a CV registration as Super Admin
Where	The area and page - e.g. Admin > Recruitment > CV Registrations
Which account	The email you were signed in with
Page address	Copy the address from the browser bar
What I expected	e.g. The candidate moves to the Approved tab
What actually happened	Describe it exactly, including any red message shown
Screenshot	Attach one - it helps more than anything else
Date and time	Approximate is fine - it helps locate the system logs
How often	Every time / only once / only on mobile

Tip for faster fixes. If a page fails to load or a button seems to do nothing, take the screenshot with the browser console open (press F12, then the Console tab). Any red text there tells the development team exactly where to look.
